# Cloud Video Platform

Secure video meetings made simple

**Fast connection  
to the Justice  
Video Service**

**Use desktop, tablet,  
mobile and room-  
based video devices**

**Easy to use  
for a range of  
meetings**

**Cloud Video Platform (CVP) delivers a new and secure conferencing service which connects the Justice Video Service (JVS) to the outside world.**

**The platform allows different types of videoconferencing systems including Skype, audio calls and room-based video conferencing systems to communicate with each other.**

**You don't need a dedicated video conferencing (VC) unit, simply connect the kit you already have.**

## Cloud Video Platform

### What is CVP?

CVP is a secure cloud based video conferencing solution, which allows all meeting participants to meet in a virtual meeting room, using the video technology they have to hand.

Joining the CVP meeting is through a link that connects all participants seamlessly to whatever video system they are using, wherever they are working.

### How do you use it?

CVP works very simply. Each cloud meeting room has an owner and an administrator (may be the same person). The administrator will send out a cloud meeting invitation with a link including easy to use joining instructions.

Participants can use any device with a camera and microphone e.g. desktop, laptop, mobile phone or tablet to join the meeting. The link can connect them via **web browser, Skype, room video conference system, conference call**.

The administrator can control the video conference and monitor who is joining, mute participants, change the screen layout and also lock the meeting so that no further participants can join.

### Who can join a meeting using CVP?

Anyone can join a CVP meeting including third parties as long as they have an invite.

### How many people can join?

A single cloud room can easily support 30 – 50 participants and you can also present to large groups. It is possible to mute everyone apart from the presenter, and then turn the 'spotlight' on them so they can be seen by everyone else.

There are many different video layouts depending on the number of participants.

### Can I record or stream my meeting?

No, these features are currently disabled.

### How secure is it?

It's very secure - all video traffic is encrypted to AES 128 security standards. Information Assurance have reviewed the solution and it holds ISO27001 accreditation.

### How much does it cost?

It's completely free to join a cloud meeting.

### Are my calls secure?

CVP supports encryption over video - so your calls are secure.

### How do I become a CVP room owner?

If your business area is new to CVP and you would like to set up a dedicated virtual meeting room please contact our Moj contacts at the bottom of this page.

### How can I find out more about using CVP?

You can view an online video that tells you more about connecting to a cloud meeting and online training materials including a handy short guide:

<https://www.youtube.com/watch?v=GpRTHL-w1KY&>

### What web browsers and firewalls support CVP?

For the latest details of firewall configuration and versions of the browser that work best, please see the link below. You may need to check your IT departments' policies with our online guide to ensure a successful CVP connection.

### Can I share my desktop/application?

Yes, CVP supports desktop sharing via Skype and browser (subject to the version being used).

### TECHNICAL SUPPORT

The links below provide detailed technical information and a link to check your device and connection with a test video call.

### Latest browser requirements
